

Hands Men Threads: Elevating the Art of Sophistication in Men's Fashion

ABSTRACT

This project details the deployment of a customized Salesforce CRM solution for Hands Men Threads, a premium men's fashion and tailoring brand. The primary goal was to optimize operational workflows, strengthen customer engagement, and ensure consistent data integrity across all business functions.

The solution includes the design of a comprehensive data model consisting of five core custom objects: Customer, Order, Product, Inventory, and Marketing Campaign. Key business processes were automated through Record-Triggered Flows, Scheduled Flows, Email Alerts, and Apex to manage order confirmations, customer loyalty status updates, and proactive inventory notifications.

Data accuracy and reliability were enforced through validation rules, while a role-based security framework was implemented to control access for Sales, Inventory, and Marketing teams. Additionally, a scheduled Apex batch job was developed to monitor and update low stock levels automatically.

Overall, this end-to-end CRM implementation enhances the customer experience through personalized interactions, improves operational efficiency through automation, and provides a scalable foundation to support future growth on the Salesforce Platform.

OBJECTIVE

The main objective of this project is to develop and implement a customized Salesforce CRM solution for Hands Men Threads to streamline core business operations, maintain data integrity, and enhance customer satisfaction.

By building a centralized system to manage customers, orders, products, inventory, and marketing campaigns, the project aims to:

- **Automate key processes** such as order confirmations, loyalty status updates, and stock alerts.
- **Ensure accurate and consistent data entry** using validation rules.
- **Enable real-time visibility** of inventory and customer interactions.
- **Improve internal team coordination** through role-based access control.
- **Deliver personalized customer experiences** through targeted communication and loyalty programs.

TECHNOLOGY DESCRIPTION

Salesforce:

Salesforce is a cloud-based Customer Relationship Management (CRM) platform that helps businesses manage customer data, automate processes, and improve service, marketing, and sales operations. It provides point-and-click tools as well as programmatic capabilities (like Apex and Flows) to build custom business solutions.

Custom Objects:

Objects in Salesforce are like tables in a database. Custom Objects are created to store specific data.

Example:

- HandsMen_Customer_c - Stores Handsmen customer info
- HandsMen_Product_c-Stores Handsmen product details
- HandsMen_Order_c-Stores Handsmen orders

Tabs:

Tabs are used to display object data in the Salesforce UI.

Example: A tab for HandsMen_Product_c allows users to easily view and manage products.

Custom App:

An App in Salesforce is a collection of tabs grouped together for a specific business purpose.

Profiles:

Profiles define what a user can see, do, and edit in Salesforce. It controls object permissions, field access, and more.

Roles:

Roles control the data visibility in Salesforce's role hierarchy. It's used for sharing settings and reporting.

Permission Sets:

Permission Sets grant additional permissions to users without changing their profile.

Validation Rules:

Validation Rules ensure data entered meets business criteria.

Example:

- Email must contain@gmail.com
- Stock cannot be negative

Email Templates:

Predefined formats for sending emails to customers or users.

Example:

- "Order Confirmation" template

Email Alerts:

Email Alerts are actions in Flows or Workflow Rules that send emails using predefined templates.

Example: When a loyalty level changes, an email is sent to the customer.

Flows:

Flows automate business logic without code. They can create, update, or send notifications.

Example:

- Flow triggers email alerts on new order

Apex:

Apex is Salesforce's object-oriented programming language. It allows developers to write custom logic.

Example Triggers:

- Update Total Amount_c in orders
- Reduce inventory stock

DETAILED EXECUTION OF PROJECT PHASES**1. Developer Org Setup**

- Create a salesforce developer Org using (<https://developer.salesforce.com/signup>)
- Verified account and change password

2. Create the custom Object

some custom objects that need to be created :

- HandsMen Customer -
- HandsMen Order
- HandsMen Product
- Inventory
- Marketing Campaign

How to create custom objects:

- From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
- Enter label, plural label, enable allow report and allow search
- Save each object that has been created

Setup Home Object Manager

SETUP New Custom Object

Help for this Page

Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Don't show this message again](#)

Custom Object Definition Edit Save Save & New Cancel

Custom Object Information Required Information

The singular and plural labels are used in tabs, page layouts, and reports.

Label Example: Account

Plural Label Example: Accounts

Starts with vowel sound ☐

The Object Name is used when referencing the object via the API.

Object Name Example: Account

3. Creating data management tabs

create tabs for each object that has been created.

how to create tabs:

- setup page → type Tabs in Quick Find bar → click on tabs → New
- Select Object → Select any tab style → Next → Next → Save.

Setup Home Object Manager

Q tabs

User Interface

Rename Tabs and Labels

Tabs

Didn't find what you're looking for? Try using Global Search.

SETUP Tabs

window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

Custom Object Tabs New What Is This?

Action	Label	Tab Style	Description
Edit Del	HandsMen Customers	Bell	
Edit Del	HandsMen Orders	Bottle	
Edit Del	HandsMen Products	Books	
Edit Del	Inventories	Fan	
Edit Del	Marketing Campaigns	Headset	

Web Tabs New What Is This?

No Web Tabs have been defined

4. Create a lightning app page

how to create lightning app page:

- Setup page → “app manager” → click on New lightning App.
- Fill the app name in app details and branding
- Select the custom object which we have created in the previous activity.
- Search profiles (System administrator) in the search bar → click on the arrow button → save & finish.

5. Data Management Fields Creation in Objects

Make sure all Fields are in the object

Heading			
Object Name	Type	Description	Key Fields
HandsMen Customer__c	Custom Object	Stores customer details	Name (Record Name), Email (Email), Phone (Phone), Loyalty_Status__c (Picklist: Bronze, Gold, Silver) [Loyalty status field is already created in previous activity do not create it again, Total_Purchases__c (Number)]
HandsMen Product__c	Custom Object	Stores product catalog	Name (Record Name), SKU (Text), Price (Currency), Stock_Quantity__c (Number)
HandsMen Order__c	Custom Object	Stores customer orders	Order_Number (Record Name), Status (Picklist: Pending, Confirmed, Rejection), Quantity__c (Number), Total_Amount__c (Number)
Inventory__c	Custom Object	Tracks inventory levels	Auto Number (Record Name), Warehouse (Text), Stock_Quantity__c (Number)
Marketing Cam	Custom Object	Manages	Campaign Name (Record Name)

Use Case

User Story

Salesforce Credentials Setup

Data Management - Objects

Data Management - Tabs

Data Management - App Manager

Data Management - Fields

Field - Email

Field - Phone

Field - Loyalty Status

Create Lookup Relationship

Formula Fields

Create Remaining fields for the objects

How to enter the field:

- setup → Object Manager → type object name in quick find bar → click on the object.
- click on “Fields & Relationships” → New
- Select the appropriate data type as it should be. → Next
- fill in the label field box → Next → Next → Save.

6. Validation Rules

To ensure accurate data entry and enforce business logic, the following validation rules were applied:

- Order Object: Prevents saving if Total Amount
Error: "Please Enter Correct Amount"
- Customer Object: Validates email contains @gmail.com.
Error: "Please fill Correct Gmail"

7. User Role & Profile Setup

- Cloned the Standard User profile to a new profile named Platform 1 and added access to necessary custom objects.
- Created roles for different departments:
Sales Manager, Inventory Manager, Marketing Team

8. User Creation

Users were created in Salesforce and assigned appropriate roles and profiles to reflect their responsibilities:

- Niklaus Mikaelson - Assigned the Sales role
- Kol Mikaelson - Assigned the Inventory role

- These role-based assignments help enforce proper data access and process control within the system

9. Email Template & Alerts

Created three email templates:

- Order Confirmation - Sent on order status = Confirmed
- Low Stock Alert - Sent when Inventory < 5 units
- Loyalty Program Email - Sent when loyalty status changes

Corresponding Email Alerts were created using these templates and linked to automation flows.

10. Flow Implementations

a. Order Confirmation Flow

- Triggered when an order is updated to Confirmed.
- Sends an Order Confirmation email to the related customer.

b. Stock Alert Flow

- Triggered when Inventory stock drops below 5.
- Sends Low Stock email to Inventory Manager.

c. Scheduled Flow: Loyalty Update

- Runs daily at midnight
- Loops through customer and updates their loyalty status based on total purchased

11. Apex Triggers

- Order Total Trigger: Auto-calculates Total Amount based on quantity and unit price.
- Stock Deduction Trigger: Reduces stock when an order is placed.
- Loyalty Status Trigger: Updates Loyalty Status based on total purchases.

PROJECT EXPLANATION WITH REAL-WORLD INDONESIAN EXAMPLE

Scenario: Retail Clothing Store in Indonesia

1. Customer Registration

A customer, Ahmad Pratama, visits the store's website or physical outlet in Bandung.

In Salesforce:

A record is created in the Customer__c object with:

- Full Name
- Phone Number (+62 format)
- Email Address

Validation Rule:

- Email must be in a valid format (contains "@" and ".com").
- Phone number must start with +62 (Indonesia country code).

2. Product Setup

The store admin adds products into the Product__c object, such as:

- Batik Shirt – IDR 350,000
- Casual Pants – IDR 450,000

Each product includes:

- Product Name
- Price (IDR)
- Category
- An Inventory__c object is also created to track stock for each product.

3. Order Placement

Ahmad decides to buy:

- 2 Batik Shirts (IDR 350,000 each)

In Salesforce:

- A new Order__c record is created and linked to Ahmad.

Apex Trigger (Order):

Automatically calculates: $(\text{Total_Amount_c} = 2 \times 350,000 = \text{IDR } 700,000)$

4. Inventory Update

Once the order is confirmed:

Apex Trigger (Inventory):

- Reduces Batik Shirt stock by 2 units.

Validation Rule:

- Stock quantity cannot be less than 0.
- Order is blocked if stock is insufficient.

5. Loyalty Program

Ahmad's total accumulated purchases are now IDR 700,000.

Loyalty Tier Logic (Trigger on Customer):

- $< \text{IDR } 500,000 \rightarrow \text{Bronze}$
- $\text{IDR } 500,000 - 1,500,000 \rightarrow \text{Silver}$
- $\text{IDR } 1,500,000 \rightarrow \text{Gold}$

Result:

Ahmad is automatically upgraded to Silver Member.

6. Email Notifications

When:

- A new order is placed, or
- Loyalty status changes
- Salesforce Flow + Email Alert is triggered.

Email sent to Ahmad:

- “Terima kasih atas pembelian Anda! Status loyalitas Anda sekarang adalah Silver Member.”

7. Users and Roles

Salesforce users are created based on store responsibilities:

- Budi Santoso – Sales Staff
Role: Sales
Profile: Platform 1
- Siti Aisyah – Inventory Staff
Role: Inventory Management
Profile: Platform 1

Each role has access limited to their operational needs.

CONCLUSION

The HandsMen Threads CRM system built on Salesforce successfully streamlines key business processes like customer management, product cataloging, order processing, inventory tracking, and loyalty program automation. By leveraging Salesforce tools like Custom Objects, Flows, Validation Rules, Email Alerts, and Apex, the system ensures accurate data entry, real-time updates, and enhanced customer experience. Through automation and well-structured user roles, the platform minimizes manual errors, speeds up operations, and provides better insights into sales and stock.

Future Scope:

1. Customer Portal Integration

Build a Customer Community Portal where customers can log in, view orders, and track loyalty status.

2. Mobile App using Salesforce Mobile SDK

Enable store staff to manage inventory and orders on the go using a mobile interface.

3. Reports & Dashboards

Create detailed sales and inventory dashboards for management to monitor trends and performance in real-time.

4. AI-Powered Recommendations (Einstein)

Use Salesforce Einstein to provide personalized product suggestions based on past purchases.

5. WhatsApp/SMS Integration

Notify customers via WhatsApp or SMS about order confirmations and loyalty updates.
